Grypho5: Managed Protection
That Evolves with Real-Time Threat Actor Behavior

GRYPHO5
A CONVERSANT GROUP COMPANY

Rapidly Changing Offense Requires Rapidly Changing Defense

Cyber terrorists are using constantly evolving, innovative tactics and leveraging gaps in your technical controls, policies, and process to penetrate, damage, and blackmail you. If your defensive strategies aren't changing just as frequently, your security is depreciating every single day. Grypho5 offers comprehensive managed solutions based on real-time, proprietary threat intelligence from our sister company, Fenix24, combined with unique insight into the most common weaknesses found in enterprises from our sister company, Athena7.

Grypho5 managed solutions are reverse engineered and evolve constantly to thwart the latest threat actor behavior. Our managed protection achieves true security outcomes because we aren't limited to providing just a product or a service. We recognize that genuine protection is only achievable through our critical combination of product, process, policy, and people.

MANAGED BACKUPS

MINIMIZING RISK and MAXIMIZING Recoverability

MANAGED FIREWALL

ESTABLISHING A SECURE PERIMETER (inbound & outbound) in a Cloud/SAAS World

COMPREHENSIVE ENDPOINT MANAGEMENT

100% ENDPOINT SECURITY and Prevention of Lateral Movement

Managed Protection Package details on reverse

> **We are confident that Grypho5's approach** to backups is unique in the marketplace. We chose this strategy because we believe it **significantly reduces the risk of a threat actor destroying our ability to recover.** The processes employed by Grypho5 reduce our recoverability risk and the time our team needs to spend on backup management.

Minimizing Risk and Maximizing Recoverability — Managed Packages to Protect Where Threat Actors Strike Most

MANAGED BACKUPS: Experience has proven that most backups are not immutable, leaving companies unable to recover quickly—or at all. Grypho5 will manage and monitor your backups and storage so you can trust they are secure, redundant, resilient, immutable, and scalable. We select, manage, configure, and deploy a redundant solution, and then fully manage and monitor backup activities, providing your IT team with complete statistical reporting. You will be able to trust that your backups will be complete and recoverable when you need them— even in the wake of a ransomware attack where, today, less than 30% of backups survive.

MANAGED FIREWALL: Grypho5 experts will select, configure, deploy, and continuously manage a firewall that meets your company's needs. We provide significantly more protections than any other services provider by ensuring your firewall is utilizing its full security features and monitoring it for malicious traffic, rule violation, configuration adherence, geofencing, DPI, DNS filtering, web filtering, file share policy, port configuration, and more. Grypho5 experts will ensure it is always optimized and up to date against real-time threats on the perimeter.

COMPREHENSIVE ENDPOINT MANAGEMENT: At Grypho5, we will exhaustively defend your endpoints by tracking and ensuring proper configuration of all inventory, continuously monitoring and managing that inventory, and patching it all in real time. We always know the status of your every endpoint; and we ensure your EDR/MDR/XDR solutions are properly configured, ingesting all infrastructure and endpoint data, so breaches can be detected and responded to in real time.

Why Grypho5?

GRYPHO5 understands the hard reality that while your security defense needs to be right 24/7, threat actors only need to be right once to penetrate. And because IT teams meet multiple demands, our approach is to partner with you, filling your unique gaps to help keep you secure despite the ever-changing threat landscape. Armed with proprietary threat actor playbooks, we can defend your infrastructure dynamically, leaving you to focus on other priorities.
